

How SD-WAN Can Save You Money

With SD-WAN, branches can now be connected with any form of internet. This enhances network agility and optimizes the entire operation. Thanks to this, connectivity decisions can now be made independent of carriers, helping enterprises avoid lengthy procurement delays (which allows for faster branch deployment times).

Once connected, SD-WAN fabric provides enterprises visibility into the centralized data center and cloud traffic. Each branch has a direct connection to the applications that are being used. This optimizes application performance. Not only do you save time and resources, you can also make better decisions.

In short, cloud-based SD-WAN offers incredible agility and speed. Installation, maintenance and monthly subscription fees are all cheaper than traditional WAN. Clearly, it's the network technology of the future for enterprises.

Field Engineer Can Help You Deploy SD-WAN Devices:

Unlike MPLS, which takes three to nine months to install, SD-WAN is incredibly agile architecture. It only takes one to seven days to install, allowing you to get up and running quickly.
